

DR. MASSAAB EL YDRISSI

InnovX, Mohammed VI Polytechnic University
(UM6P), Benguerir, Morocco

He has worked extensively on PV technologies and thermal energy systems, developing innovative solutions for the modeling and inspection of solar power plants. He has co-authored numerous research publications in the field of renewable energy and has made significant contributions to advancing scientific knowledge in solar energy systems. He has successfully managed several R&D projects, with a strong focus on technology scouting, project definition, and roadmap development. In his current role, he works on the technological development of energy gigafactories and actively bridges the gap between academic research and industrial implementation to drive forward the energy transition.
